

500W X-Band 5RU SSPA Chassis

Teledyne Paradise Datacom's Indoor, Rack Mount (R) series SSPAs represent the latest in High Power Microwave Amplifier Technology. The 5RU SSPA chassis achieves the highest power density in the industry along with enhanced maintainability.

Local control is available with a front panel color touchscreen display, with a menu structure full of useful functions. Five fault condition indicators reflect some of the SSPA major faults states. The amplifier icon on the mimic panel turns green when the amplifier is in Online mode (1:1 Mode). Local/Remote and Mute/Unmute indicators show the current control mode and mute state of the amplifier.

Serial and parallel (contact closure) control is also available from the rear panel. Our free Universal M&C software allows monitor and control of the SSPA from a remote computer.

A state of the art thermal platform provides efficient cooling for the amplifier module and power supplies. This ensures the highest possible MTBFs for microwave power amplifiers.

Prime power to the amplifier is provided by a separate, external power supply in an N+1 redundant configuration. A failure of one power supply module will not take the amplifier off the air.

FEATURES

- Extremely High Power Density:
 - to 600 W C-Band
 - to 500 W X-Band
 - to 250 W Ku-Band
- Removable Fan Tray and Monitor & Control Card Assembly
- Remote Communication via RS232/485 or Ethernet
- RF Output Sample Port
- 20 dB Gain Adjustment
- 1RU N+1 Power Supply
- Color Touchscreen Display
- True RF Output Power Measurement
- Built-in Maintenance Switch Controller

OPTIONS

- Remote Control Panel
- L-Band Input operation
- Reflected Power Monitor
- Input Sample Port
- Exhaust Duct Adapters
- Redundant Systems
- Phase Combined Systems

True RF Power Detector	Range Accuracy	P _{sat} to (P _{sat} - 20) ± 0.5	dB dBm

Specifications are subject to change without notice.

1RU N+1 Redundant Power Supply

The combination of a separate, fully redundant power supply is an excellent means of obtaining the ultimate in system reliability. The power supply is an N+1 redundant configuration, meaning that there is one more power supply module available than required to operate the SSPA. A failure of one power supply module will not take the amplifier off the air.

L-Band Operation

Teledyne Paradise Datacom amplifiers are available with an integrated L-Band Block Up Converter. L-Band units utilize Teledyne Paradise Datacom's proprietary zBUC technology. The addition of a zBUC® converter to the SSPA typically increases the gain by 2-4 dB. The advantages of zBUC technology include:

- zBUC converter can detect and switch to an externally supplied reference.
- Optional internal high stability (10MHz) reference.
- zBUC converter can lock to an externally supplied reference of 10 or 50 MHz.
- zBUC converter can accept a wide range of external reference power (-10 to +5 dBm).

Available Frequency Plans

Band	Frequency Plan*	IF Input	LO Frequency	RF Output
C	Sub-Band "A"	950 - 1525 MHz	4.900 GHz	5.850 - 6.425 GHz
C	Sub-Band "B"	950 - 1825 MHz	4.900 GHz	5.850 - 6.725 GHz
C	Sub-Band "C"	950 - 1870 MHz	4.800 GHz	5.750 - 6.670 GHz
C	Sub-Band "E"	950 - 1250 MHz	5.475 GHz	6.425 - 6.725 GHz
C	Sub-Band "F"	950 - 1250 MHz	5.775 GHz	6.725 - 7.025 GHz
C	Sub-Band "L"	950 - 1550 MHz	3.450 GHz	4.400 - 5.000 GHz
X	Sub-Band "A"	950 - 1450 MHz	6.950 GHz	7.900 - 8.400 GHz
Ku	Sub-Band "A"	950 - 1450 MHz	13.050 GHz	14.00 - 14.50 GHz
Ku	Sub-Band "B"	950 - 1700 MHz	12.800 GHz	13.75 - 14.50 GHz

X-Band Receive Band Filter Option

X-Band GaAs amplifiers may be ordered with an external receive band reject filter. The filter used for frequency band 7.90 to 8.40 GHz is model L205250-X6-TX.

Outline Drawing, Typical Ku-Band SSPA Chassis

Redundant and Phase Combined Systems

Teledyne Paradise Datacom's 5RU Rack Mount SSPAs can be configured in a variety of redundant and phase combined configurations.

- 1:1 Redundant System with Internal Redundancy Control
- 1:1 Redundant System with RCP2-1100 Redundant System Controller
- 1:1 Fixed Phase Combined System with FPRC-1100 Phase Combined System Controller
- 1:2 Redundant System with Internal Redundancy Control
- 1:2 Redundant System with RCP2-1200 Redundant System Controller
- 1:2 Fixed Phase Combined System with FPRC-1200 Phase Combined System Controller

System Output Power Capacity

Due to residual losses inherent in redundant system configurations (waveguide bends; switch and coupler losses), reduce the typical output power specification of a single amplifier by approximately 0.2 dB for 1:1 and by 0.4 dB for 1:2 systems.

In phase combined systems, these same losses result in slightly less than the ideal addition of 3 dB to the output power of a single HPA unit. For 1:1 phase combined systems, the typical additive output power is approximately 2.70 dB above the output power of a single HPA. For 1:2 phase combined systems, the typical additive output power is approximately 2.50 dB above the output power of a single HPA.

Actual system losses will vary based on the system options.

System Controllers

The 1RU system controller provides an extremely user friendly interface for complete monitor and control of the amplifier system.

Redundant System Controller Configured for 1:1 Redundant Mode

The front panel touchscreen display shows the on-line amplifiers and the switch positions. Fault indicators are provided for easy identification of system status. All system monitor and control is available locally at the front panel, as well as remotely by the RS232, RS485, or Ethernet interface ports. Audible alarms and a full complement of parallel I/O signal are available at the rear panel of the controller.
